1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

**Topic:** Mathematics  
**Section:** Algebra  
**Question:** What is the value of x in the equation 2x + 5 = 15?  
**Answer:** x = 5

**Low- and high-molecular-weight** fractions of poly(2-vinylpyridine) were prepared by precipitation from a common solution of the polymer in a mixture of tetrahydrofuran and methanol. The low-molecular-weight fraction was obtained by precipitation with excess methanol, and the high-molecular-weight fraction was obtained by precipitation with excess tetrahydrofuran. The fractions were characterized by gel permeation chromatography and by size exclusion chromatography with a refractive index detector. The low-molecular-weight fraction was found to be a linear polymer with a molecular weight of approximately 10,000. The high-molecular-weight fraction was found to be a linear polymer with a molecular weight of approximately 100,000. The fractions were also characterized by infrared spectroscopy and by nuclear magnetic resonance spectroscopy. The low-molecular-weight fraction was found to be a linear polymer with a molecular weight of approximately 10,000. The high-molecular-weight fraction was found to be a linear polymer with a molecular weight of approximately 100,000.

1. **Identify the problem.** The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

# BATMAN

WITH  
**ROBIN**  
THE BOY WONDER

History says  
a brilliant actor (and  
man) from the  
theater, who was  
a leading player in  
the silent film era,  
was the first to  
portray the character  
of Batman. He was  
Burt Lancaster, who  
played the role in  
the 1942 film "Batman  
and Robin".
